Full Stack Software Developer and former warehouse associate with 2 years experience working in a fast-paced environment. My previous experience built a foundation of reliability, perseverance, and teamwork into my skill-set as an employee. Currently pursuing a career in software development with a hunger to learn and grow as a programmer, while striving to add value to a team and succeed at the professional level.

Technical Skills

HTML, CSS, Bootstrap, JavaScript, jQuery, Java SE, Java EE (Servlets, JSP), Spring, Thymeleaf, MySQL, Object-Oriented Programming, Test-Driven Development, Version Control with Git, Paired Programming

Development Projects

MobileEats

MobileEats is an application that allows mobile food vendors to be able to relay all business information such as current locations, menus, pricing among other things to a wide user audience. Users of the application can utilize it to track vendors via a map interface and can also submit reviews of the different vendors. Application also has notifications capability via Mailgun. This application was created as a team project with Java, Spring Boot, MySQL, HTML, CSS, JavaScript, and jQuery. Application was made as an MVC design pattern. And it implements full CRUD functionality with the custom built database.

Mintbean Hiring Hackathon Go Fish Game

An online version of the classic card game "Go Fish". This project was a front end entry into the Mintbean hiring hackathon. It was built using HTML, CSS, Javascript, JQuery, and Bootstrap.

Weathermap Project

Used Mapbox API and OpenWeatherApp API to display a 5 day weather forecast in a user selected area.

Simon-Says Memory Game

Javascript based game that tests memory by highlighting a number of boxes that the player then has to repeat in the same order to proceed to the next round.

Javascript Matching Game

A card matching memory game built with vanilla javascript, and styled with bootstrap and CSS.

Booklister

BookLister is an Ad-Lister where users can go to buy books or post books for sale. A user has the ability to search for books by genre, also by name. After creating an account, and logging in users have the ability to create an ad post, edit a post, delete a post, leave a rating or a comment on a specific post. Admin users have the ability to delete users, create users, also create and delete posts made by other users. Guest users who visit the site without creating an account will have read-only access.

Movie App Project

Used JavaScript and ajax requests to give users the ability to create, edit, view, and delete movies.

Coffee Project

Created a , Bootstrap styled, JavaScript application that allows the user to create, view, and remove different types and brews of coffees in a list.
